

TYPE I

TYPE Ia

TYPE II

Type Ia. The design characteristics are similar to type I except that all of the lines of the design are stronger. The toga button, toga rope and rope shading lines are heavy.

The latter characteristics are those of type II, which, however, occur only on impressions from rotary plates. Used only on flat plates 10208 and 10209.

Type II. Shading lines in ribbons as on type I. The toga button, rope and rope shading lines are heavy.

The shading lines of the face at the lock of hair end in a strong vertical curved line.

Used on rotary press printings only.

TYPE III

TYPE IV

TYPE V

Type III. Two lines of shading in the curves of the ribbons.

Other characteristics similar to type II.

Used on rotary press printings only.

Type IV. Top line of the toga rope is broken.

The shading lines in the toga button are so arranged that the curving of the first and last form "CID".

The line of color in the left "2" is very thin and

usually broken. Used on offset printings only.

Type V. Top line of the toga is complete.

There are five vertical shading lines in the toga button.

The line of color is the left "2" is very thin and usually broken.

The shading dots on the nose are as shown on the diagram.

Used on offset printings only.

TYPE Va

TYPE VI

TYPE VII

Type Va. Characteristics are the same as type V except in the shading dots of the nose. The third row of dots from the bottom has four dots instead of six. The overall height is $\frac{1}{3}$ mm. shorter than type V.

Used on offset printings only.

Type VI. General characteristics the same as type V except that the line of color in the left "2" is very heavy. Used on offset printings only.

Type VII. The line of color in the left "2" is invariably continuous, clearly defined and heavier than in type V or Va but not as heavy as type VI.

An additional vertical row of dots has been added to the upper lip.

Numerous additional dots have been added to the hair on top of the head.

Used on offset printings only.
